

Slot5 – Introduction to React-Bootstrap (Installation, Basic Component: Button, Card, Grid)

=====

What is react bootstrap??

a UI library built on bootstrap, used in the form of React components.

Helps write cleaner code without manually writing css classes

=====

Provide built-in component: Button, Navbar, Card, Grid, Form, Modal,..)
Responsive(auto adapts to different screen sizes)

=====

Install:

`npm i react-bootstrap bootstrap`

=====

after install, import:

`import 'bootstrap/dist/css/bootstrap.min.css';`

=====

Navbar:

used to create a navigation menu bar

Can include a logo, links, buttons, and dropdown menus.

=====

Form:

-Provides components such as Form.Control, Form.Group, and Form.Check,...

-Makes it easy to create login, registration, and search forms.

=====

Modal:

-A popup dialog box used to display information or collect user input

-Commonly used for “Confirmation”, “Add new”, “Edit” actions.
